

## ARGOS-Database Import

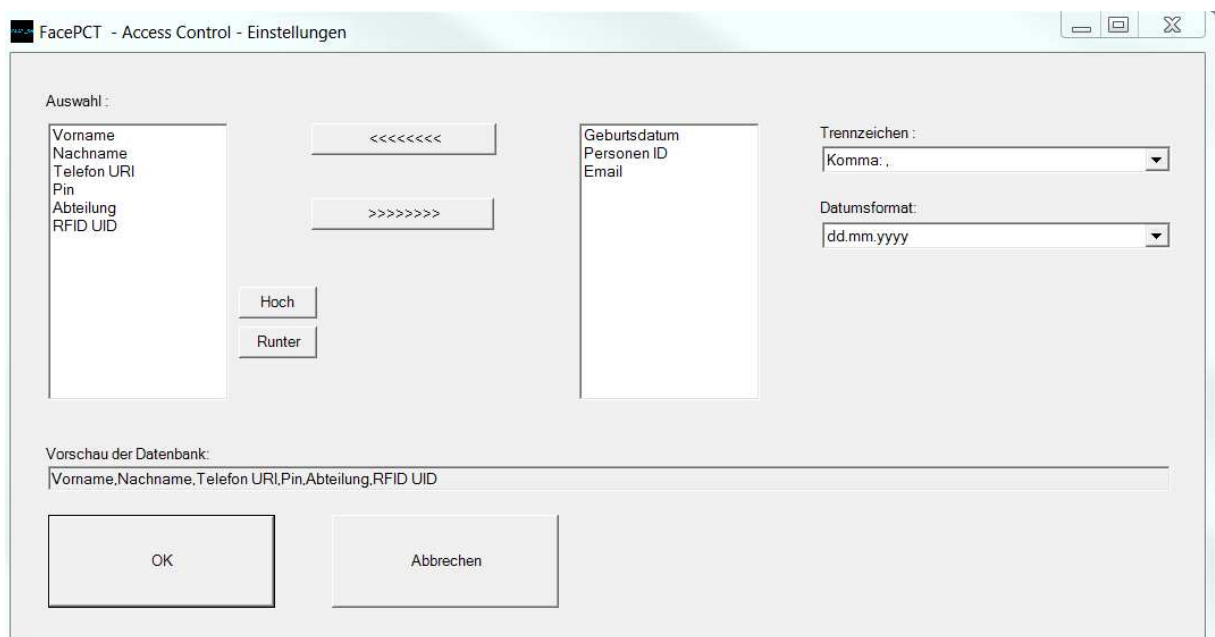

### 1. Introduction

With FacePCT, data can be converted from comma separated lists into a ARGOS personnel database.

### 2. Format of import list

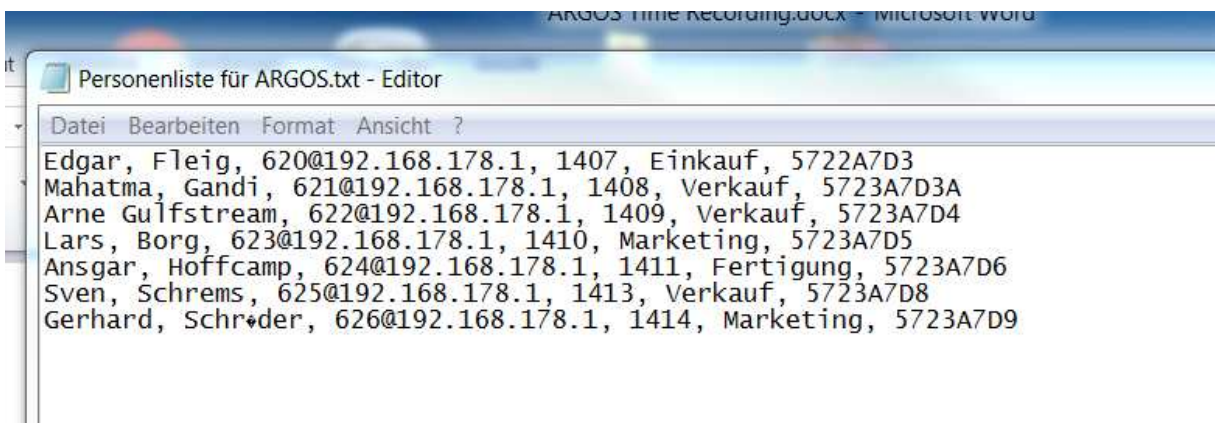

The menu item "File → Personnel Database → Settings" is used to define the format of the list. In the dialog, the fields to be used can then be pushed into the left list with the <<<<<<< button. Use the up and down keys to set the order.

Comma or Tabstop are allowed as separators. In addition, the date format is set for the date of birth.

### 3. Open import list

With File → Personnel Database → Open, a comma separated list corresponding to this format can be loaded.

Carus

*a touch of eternity*

4. Create a ARGOS Personnel database

**File → Personnel database → Create archive** creates a ARGOS personnel database.
