

ARGOS-Database Import

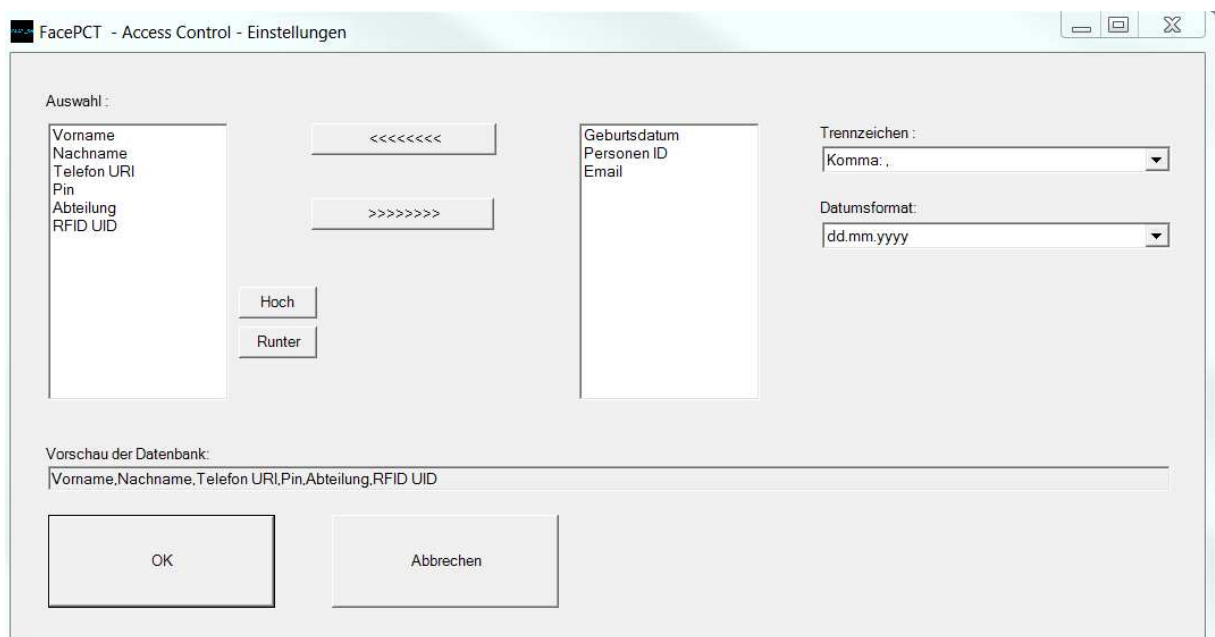

1. Introduction

With FacePCT, data can be converted from comma separated lists into a ARGOS personnel database.

2. Format of import list

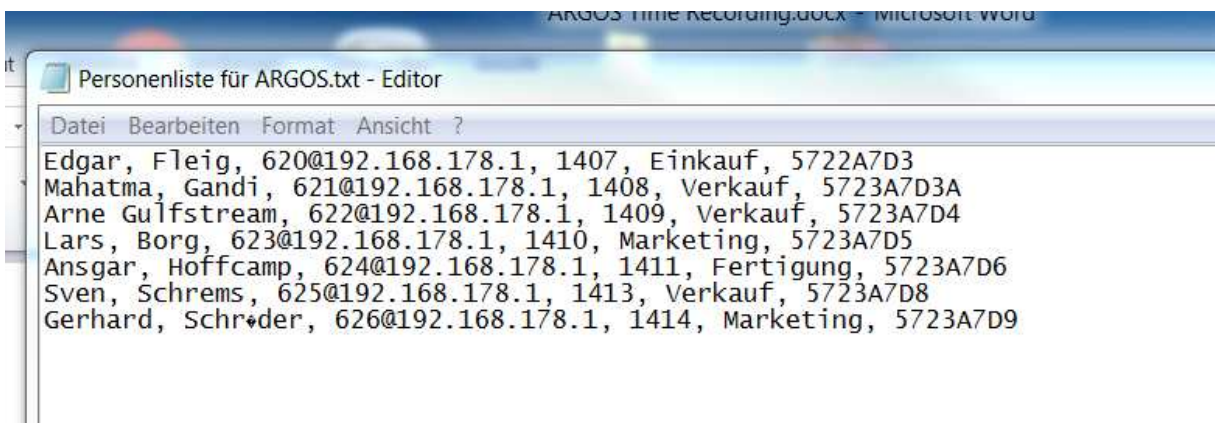

The menu item "File → Personnel Database → Settings" is used to define the format of the list. In the dialog, the fields to be used can then be pushed into the left list with the <<<<<<< button. Use the up and down keys to set the order.

Comma or Tabstop are allowed as separators. In addition, the date format is set for the date of birth.

3. Open import list

With File → Personnel Database → Open, a comma separated list corresponding to this format can be loaded.

Carus

a touch of eternity

4. Create a ARGOS Personnel database

File → Personnel database → Create archive creates a ARGOS personnel database.
